You don’t have time to learn and use different tools to generate clinical reports. You need data-rich clinical reporting and analytics that provide a structured and flexible approach across all cardiology modalities, enabling consistent reads.

Now you can.

**How We Help You**

Merge Cardio structured clinical reporting automatically pre-populates information such as image measurements, hemodynamics data, and historical patient data, into one record, ensuring a more complete and accurate report. This not only provides an integrated, single view of current and historical patient data; it enables efficient, effective care.

The days of dictation, transcription, editing and reviewing are over. With data pre-population, integrated voice recognition and inferential findings, report turnaround time can be reduced from days to minutes. And, as each confirmed report is posted to the patient’s medical record and distributed, every data element is written to the CardioAnalytics database, providing you with powerful metrics to help improve performance.
Merge’s structured reporting & analytics is a full suite of tools to help your cardiology department improve efficiency and enhance care. It can help you:

- Report findings easily with complete sets of cerebral, coronary, and peripheral interactive anatomical diagrams, as well as “bulls eye” and wall motion diagrams.
- One reporting application supports all modalities (adult and peds echo, cardiac/peripheral vascular, nuclear, non-invasive vascular, EP and CT-A).
- Facilitate accreditation through specialized CardioAnalytics reports for ICAEL, ICAVL, ICANL, etc.
- Aggregate patient data across multiple departments, clinics and offices to one central database, allowing you to analyze, benchmark and refine workflow.
- Accelerate cardiology report distribution, leading to improved time to treatment and enhanced communications between clinicians.

**Merge Cardiology Solution Suite**

*Merge Cardio™*
Access and manage your patients’ digital integrated cardiovascular record from a centralized, web-enabled system that lets you streamline report generation and distribution.

*Merge Hemo™*
Document the hemodynamic workflow and data collection in your cath lab into a digital patient record using a simplified touch screen interface and automated reporting.

**Merge Cardiology Solutions**
Merge Cardiology Solutions provide a single integrated view of a patient’s complete cardio record from all modalities and access to simplified reporting tools, so physicians can get information faster, reports are quick and consistent, and procedures are done more efficiently.

For more than 25 years, Merge Cardiology Solutions have been developed through a partnership with cardiologists and clinical staff, providing systems and tools with workflow and reporting that physicians are familiar with and comfortable using. This makes adoption of these systems successful, so hospitals, labs and patients can benefit from the efficiencies and cost savings that come from best-of-breed information and imaging solutions.

The Merge Cardiology Solution seamlessly integrates with the industry’s largest health information systems and EHRs for interoperable image exchange, a key component of an overall strategy to provide secure and timely access to patient information regardless of location and affiliation.
