

Merge LabAccessTM

A tool to provide connectivity between instruments and practices

Transmitting results directly from instruments to the EMR via Merge LabAccess frees up at least **1 to 1.5 hours** of the staff's time each day.

The physicians at your practice want faster lab results, your lab personnel want to eliminate manual entry of results, and you want to reduce data entry errors and improve the patient experience.

Now you can do all of this.

How We Help You

Merge LabAccess lets you connect your clinical instruments with your EMR or Practice Management System (PMS) for immediate transmission of results—speeding results to physicians and improving lab efficiency.

Merge Clinical Lab Solutions provide scalable laboratory information systems and middleware connectivity for clinical labs of all sizes.

With Merge LabAccess You Can

Monitor real-time instrument logs

Configure patient reports

Support multiple instruments

Receive orders, capture results from all interfaces, and return them to the desired EMR or PMS

Process orders and print professional/chartable patient reports automatically at sites without an EMR/PMS

Merge Clinical Lab Solution Suite

- + Merge LIS[™]:**
Automate your lab workflow and process for increased efficiency with a scalable clinical laboratory information system.
- + Merge LabAccess[™]:**
Transmit lab results electronically with a tool to provide connectivity between instruments and practices.

Merge Clinical Lab Solutions

Merge Clinical Labs Solutions, originally designed by Fletcher Flora, provide scalable laboratory information systems and middleware connectivity for clinical labs of all sizes—from small physician office labs to large labs with multiple sites.

Merge Clinical Lab Solutions are designed with significant customer input and reflect the workflow and specific needs of the lab with stand-out features including modular functionality that allows you to grow as needed and have web-based access for real-time results.
