

Merge Eye Station[™]

An image capture software and digital interface for existing fundus cameras

A recent study by
Ophthalmology
Management found that
many ophthalmologists
have been motivated
more by practice reality
than financial incentives
to start implementing
digital solutions.

Before you can consider ophthalmic image management systems and an EMR, you need to digitize your images. You need a digital imaging system that works with your existing cameras and your type of ophthalmic practice.

Now you can.

How We Help You

Merge Eye Station instantly converts your existing fundus camera or slit lamp to a fully-digital system that produces journal quality images. With solutions up to 21 megapixels you can now improve your image quality without replacing your camera, allowing you to more efficiently diagnose your patients.

Merge Healthcare has a client base of **more than 2,000 sites**, representing over 60% of the top ophthalmic institutions in the United States.

With Merge Eye Station You Can

to **21MP**

Select a system meeting your resolution requirements up to 21 megapixels

Grow your practice imaging capabilities without costly fundus camera replacement

Have the same user-interface across multiple fundus camera models and brands

Integrate slit lamp imaging using Eye Station Slit Lamp or Eye Station Video Slit Lamp HR

Interface to 21 different fundus cameras and 8 different photo-slit lamps

Merge Eye Care Solution Suite

- + Merge Eye Station™:**
Convert your existing fundus camera or slit lamp to a fully digital system without replacing your camera
- + Merge Eye Care PACS™:**
Automatically import all of the images and diagnostic reports from multiple diagnostic devices into a single web-based system and review them anywhere
- + Merge EHR/PM™ for Eye Care:**
An integrated electronic health record and practice management solution built for the unique needs of ophthalmic practices

Merge Eye Care Solutions

Merge Eye Care Solutions provide a suite of products specifically for ophthalmic imaging and informatics, including a single platform electronic health record (EHR) and practice management system, a digital imaging management system, and a modular imaging device that can capture images of both anterior and posterior segments.

Merge Eye Care Solutions provide an opportunity for practices to meet the growing need for increased patient visits, early detection and accurate tracking of disease progression.

Formerly known as OIS WinStation, Merge Healthcare is proud to welcome Merge Eye Station to the Merge Eye Care Solution Suite.
