

Merge EyeScanTM

A portable imaging device built for ease of use and diagnostic capabilities for both the anterior and posterior segments

Worldwide,
285 million people
are visually impaired.

As your practice grows to meet the demand for eye care, you plan to invest in additional imaging devices. You would like to have a portable diagnostic device that captures images of both the anterior and posterior segments and also produces high-quality images.

Now you can.

How We Help You

Merge EyeScan helps your practice save time and money by offering a portable device that captures high-resolution images through seven interchangeable modules that easily switch out, without having to move the patient or the device.

Merge Healthcare has a client base of **more than 2,000 sites**, representing over 60% of the top ophthalmic institutions in the United States.

With Merge EyeScan You Can

Capture high-resolution images of the anterior and posterior segments

Utilize the hand-held device in wheelchair-bound patients and children

Share among different offices with the built-in portability

Use all the existing standards of DICOM and HL7 for patient demographics and image storage

Allow cross-functional testing over the entire eye, including fundus imaging, fluorescein angiography, tear film, red reflex, topical fluorescence, non mydriatic and slit imaging

Merge Eye Care Solution Suite

- + Merge EyeScan™:** Capture high-resolution anterior and posterior segment views with an ultraportable, modular imaging device
- + Merge Eye Station™:** Convert your existing fundus camera or slit lamp to a fully digital system without replacing your camera
- + Merge Eye Care PACS™:** Automatically import all of the images and diagnostic reports from multiple diagnostic devices into a single web-based system and review them anywhere

Merge Eye Care Solutions

Merge Eye Care Solutions provide a suite of products specifically for ophthalmic imaging and informatics, including a single platform electronic health record (EHR) and practice management system, a digital imaging management system, and a modular imaging device that can capture images of both anterior and posterior segments.

Merge Eye Care Solutions provide an opportunity for practices to meet the growing need for increased patient visits, early detection and accurate tracking of disease progression.

Formerly known as OIS EyeScan, Merge Healthcare is proud to welcome Merge EyeScan to the Merge Eye Care Solution Suite.
