

iConnect[®]

Creating comprehensive image exchange

One billion hours of administrative processing time is to be used to get healthcare data to the right place at the right time.

We all know that diagnostic imaging is a critical element of the patient's electronic record, but getting your results and images to the point of care can be difficult at best. Currently, your patients often serve as the transport mechanism, carrying films and CDs with them to each medical encounter. Often these CDs are unreadable, which means that your collaboration with the referring physician breaks down and the patient may end up re-taking exams. If only there was a way to avoid these frustrations and streamline the healthcare process.

Now there is.

How We Help You

iConnect is an integrated software suite that facilitates the sharing of diagnostic content and results across the continuum of care. Using an IHE compliant architecture, iConnect provides real-time access to any image on any web-enabled device, enabling faster and broader health information exchange.

iConnect is an integrated suite of software products that delivers complete image interoperability —lowering costs and improving patient care while also serving as a foundation for a comprehensive enterprise imaging strategy.

With iConnect You Can

Consolidate diagnostic images from disparate imaging solutions into one archive in a standard and vendor-neutral DICOM format

View outside studies and store them in the local PACS system environment, regardless of the source system, location or format

Provide images for referring physicians from any browser-based device

Embed a link to iConnect Access within an EHR or hospital HIS to gain immediate access to images

Automate the patient check-in and queuing process

Merge Interoperability Solutions

iConnect is the only comprehensive solution for collecting, archiving, viewing, sharing and exchanging any type of image, anywhere and anytime. Interoperable image exchange and management is an enabling technology that reduces or eliminates many barriers to efficiency in healthcare organizations. True interoperable image exchange is a key component of an overall strategy to provide secure and timely access to patient information regardless of location and affiliation. This reduction in time and cost is beneficial to healthcare providers, physicians and patients.

iConnect works with existing applications, leveraging widely-used web and healthcare technology standards, to provide a vendor-neutral interoperable environment. Healthcare providers and physicians can use and benefit from iConnect's scalability from simple image viewing all the way to enterprise level management and integration of diverse image sources and applications.

iConnect Solution Suite

- + Merge Honeycomb[™]:**
Harness the power of the cloud to upload, download, view and share images anywhere, anytime with the nation's largest medical image sharing platform.
- + iConnect[®] VNA:**
Archive all of your enterprise-wide images with a vendor-neutral solution that enables providers to manage images and content from disparate PACS into a consolidated patient view.
- + iConnect[®] Share:**
Share any image between your enterprise and referring centers via an Internet-based gateway, and replace the patient-borne CD.
- + iConnect[®] Access*:**
Provide diagnostic quality image review for referring physicians from any browser-based device with a zero-download image and XDS viewer, and build your referral network.

iConnect Access is not FDA-cleared for diagnostic use on mobile devices.
