

Merge OrthoEMR™

An electronic medical record designed specifically for orthopaedic workflow

\$44,000. The amount of reimbursements orthopaedic practices can earn meeting Meaningful Use.

You want an EMR system for your practice that qualifies for Meaningful Use (MU). At the same time, you want a fully-functional system designed for your orthopaedic workflow, so you can be more productive and see more patients.

Now you can have both.

How We Help You

Merge OrthoEMR has received complete EHR ambulatory certification, letting you meet MU requirements, record patient visits and create centralized records with a system that works the way your orthopaedic practice works. The results? Faster care and the ability to qualify for MU incentives.

Merge Orthopaedic Solutions provide a suite of products **developed for the specific needs of the orthopaedic practice**, from patient information to image management.

With Merge OrthoEMR You Can

Provide a point-to-click user-tablet based on existing charts

Use ortho-specific templates or dictation to document patient visits

Enhance current clinical workflow with electronic tasking and automated chart routing

Deliver added-value to your patients with ePrescribing

Gather mandated patient data intuitively within a preferred workflow

Merge Orthopaedic Solution Suite

- + Merge OrthoEMR™:**
Record patients' visits and create centralized patient records with a web-based electronic medical record system that works the way your orthopaedic practice works.
- + Merge OrthoPACS™:**
Capture and store digital images with a picture archive and communication system that lets you see more patients, more efficiently.
- + Merge OrthoCase™:**
Create preoperative orthopaedic plans for each case with digital templating from any location.

Merge Orthopaedic Solutions

Merge Orthopaedic Solutions provide a suite of products developed for the specific needs of the orthopaedic practice, from patient information to image management including digital templating. The integrated solution allows orthopaedic surgeons to meet Meaningful Use with toolsets and workflows designed to meet orthopaedic-specific needs.

Merge Orthopaedic Solutions have been developed by orthopaedic specialists, providing systems and tools that mirror charting and patient care today, increasing the long-term adoptability and satisfaction of users. Imaging and data sharing promote interoperability, without forcing conformance to non-specialty hospital-based solutions.
