Your cardiology department has a first-time patient who has previous cardiology images at an imaging center across town. Your cardiologist laments that his PACS system doesn’t have a consolidated view of the patient’s diagnostic images and health record.

Now it can.

How we help you

iConnect Enterprise Archive lets you store, manage and share all of your enterprise-wide images, DICOM and non-DICOM, from disparate PACS, specialties, service lines, and sites regardless of source or format for a complete image management solution, allowing physicians to access current and historical images at the point of care on any device. With iConnect Enterprise Archive, you can extend your IHE strategy to include XDS support, access a consolidated view of a patient’s health record with rich integration to the EHR enabling care providers to make more informed decisions for their patients, and ensure access to essential patient data on any device.
iConnect Enterprise Archive archives your enterprise-wide DICOM and non-DICOM information for a consolidated view that allows access to patient images at the point of care. With iConnect Enterprise Archive you can:

- Eliminate expensive data migrations with the DICOM Migration System module, designed to allow you to cleanse, migrate, and manage your data
- Ensure imaging data is stored in a secure, standards based, vendor neutral, and interoperable format
- Consolidate data silos while cleansing and normalizing data with DIY Morphers
- Reduce storage costs while maintaining compliance with proven Information Lifecycle Management and Policy-Based Deletion solutions
- Provide business continuity and disaster recovery to ensure vital patient data is always available

**Merge Interoperability Solutions**

iConnect is the only comprehensive solution that combines a DICOM archive and integrated XDS source or repository running on a single database for collecting, archiving, viewing, sharing, and exchanging and sharing any type of image and enables enterprise imaging to reduce or eliminate barriers in healthcare efficiency. True interoperable image exchange is a key component to delivering secure and timely access to patient information regardless of location and affiliation. iConnect extends beyond imaging and offers a powerful vendor neutral enterprise workflow management that aggregates orders from multiple referral sources, simplifies the reading workflow, centralizes the flow of studies and provides analytics across PACS vendors. These reductions in time and cost are beneficial to healthcare providers, physicians and patients.

With iConnect, you can leverage existing applications and widely-used web and healthcare technology standards to create a vendor-neutral interoperable environment. Providers and physicians benefit from the platform’s scalability, from simple image viewing to enterprise-level management and integration of diverse image sources and applications.

Statement of Good Security Practices: IT system security involves protecting systems and information through prevention, detection and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, misappropriated or misused or can result in damage to or misuse of your systems, including for use in attacks on others. No IT system or product should be considered completely secure and no single product, service or security measure can be completely effective in preventing improper use or access. IBM systems, products and services are designed to be part of a lawful, comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products or services to be most effective. IBM does not warrant that any systems, products or services are immune from, or will make your enterprise immune from, the malicious or illegal conduct of any party.

**Merge Interoperability Solution Suite**

**iConnect® Enterprise Archive**
A vendor neutral archive (VNA) to create an enterprise imaging strategy.

**iConnect® Access**
A zero-download diagnostic viewer and image exchange platform.

**iConnect® Cloud Archive**
A cloud-based image storage and management solution.

**iConnect® Capture**
A solution for ingesting, storing, and managing any type of non-DICOM content.

*iConnect Access is not FDA-cleared for diagnostic use on mobile devices.
*iConnect Enterprise Archive is not FDA-cleared for diagnostic use on mobile devices.
